RAIN BARRELS, COMPOSTERS AND RECYCLING BARRELS

Terracotta

Blue

Black

Barrels available in various sizes: refer to inventory/price list. Barrels may vary slightly in design

Typical plastic rain barrel lid with aluminum screen plastic welded to the inside of the lid to keep out bugs and trash.

Connect two or more barrels through the overflow connections at the top of the barrels. A **nylon spigot** is included with each barrel.

Rain barrel connector
These overflow fittings allow excess water to be diverted into a second barrel (or third, or fourth etc.)

Rain barrels have a screw on top with one inch holes, screen mesh to keep out debris and mosquitoes, three top overflow male hose connections with caps, a nylon spigot and a bottom drain plug. The overflow fittings allow excess water to be diverted into a second barrel (or third, or fourth etc.), or by attaching hoses, excess water can be diverted to remote areas such as gardens or flowerbeds.

The **nylon spigot** is shipped inside the barrel and will need to be screwed into the pre-installed plastic fitting by the customer. The spigot has Teflon tape applied to the threads, and should only be installed finger tight. The nylon spigot can be interchanged with the bottom drain plug if desired.

Per our supplier: All of the plastic rain barrels are recycled. Even though they have thoroughly cleaned them inside and out, and applied several coats of a UV polish, the barrels may still have some scratches and scrapes. This should be considered as part of the "character" of the recycled rain barrels.

**OUR PRODUCTS CAN BE SHIPPED
DIRECTLY TO YOUR HOME !**

Whiskey barrels are 35" tall with a 23" diameter. Pump is 16" tall
 Shown with an **optional cast iron stand**

The white oak rain barrels have a downspout connector, three overflow male hose connectors, a brass spigot and a bottom drain plug.

The brass spigot can be inserted in the middle fitting of the barrel
 or in the bottom fitting of the barrel.

Optional accessories for use with existing gutter downspouts

Gray barrel with pump handle

A flex elbow is used to direct water into the rain barrel. It can be used with all rain barrels. Flex Elbows come in white or brown and are only 3" by 2" in size. If you choose to install your rain barrel using a flex elbow, cut out a 12" section of the down spout beginning about 12" above the top of the rain barrel. Leave the bottom part of the downspout connected to the house. If you install your barrel in this manner, when your rain barrel is full, or when you remove your rain barrel during the winter months you can insert the bottom of the flex elbow back into the bottom section of the down spout.

You no longer have to worry about an overflowing rain barrel!

"Aunt Molly's Rain Diverter" fits BOTH residential 2"x3" AND commercial 3"x4" downspouts

Measure your downspout

"Rain Reserve Diverters" are made for 2"x3" residential downspouts. There is an **optional** 3"x4" adapter

The diverter is a system that attaches to your downspout. After the rain barrel is full, the diverter will automatically re-direct the rain water back into the downspout. The "Aunt Molly's" diverter fits our rain barrels, and will work with almost any open top or closed top rain barrel as long as the rain barrel has a male hose overflow connection. The diverter can be installed above the rain barrel if it is a closed top system, but must be installed level with the top of the rain barrel if it is a model with screened holes in the top.

OUR PRODUCTS CAN BE SHIPPED DIRECTLY TO YOUR HOME !

TUMBLING COMPOSTERS

Parts consist of
1 Composter barrel
2 triangular steel legs
with circular inserts
2 steel cross braces
2- 1&1/2" nipples
8 bolts and 8 nuts with
lock washers

Parts Consist of
2 Composter Barrels
3 Triangular Steel Legs 3 Circular Steel Inserts
4 Steel Cross Braces
4 1&1/2" Nipples
16 Nuts with lock washers and
16 Bolts

Screw on lid
with holes

Bottom with
holes

Center cross T used to break
up composting material each
time the composter barrel is
turned

RECYCLING BARRELS

Choose from barrels labeled: aluminum, paper or plastic

These recycling barrels are made from used barrels; you can't get much GREENER than that! Whether your recycling needs are for paper, plastic bottles, or aluminum cans, each barrel is marked with the designated product to be recycled, and has appropriate size holes cut in the lids. The barrels are designed to be used indoors or outdoors, with a drain plug in the bottom for easy cleaning, or draining if necessary. The barrels have screw on lids and can be used with or without plastic trash bags. Each barrel has a 60 gallon capacity.
