

OASIS PIPELINE WILDFIRE RECOVERY & RECLAMATION WORKSHOP

WILDFIRE OVERVIEW

EROSION PROTECTION

Where do we go from here?

SLOPE SEEDING DEMOS

NOV. 12, 2011 TTU JUNCTION CAMPUS

Landowners affected by recent wildfires will gain knowledge and resources towards reducing the devastating long-term impacts to their land.

Informative indoor sessions and onsite demonstrations provide you with hands-on techniques & support for recovery of burned areas. Please register soon for this 8:30am to 4:30pm workshop. Sack lunch provided, recommended \$10 donation at the door.

Funding for conservation work on private lands is being offered through the Texas Parks and Wildlife Department, Landowner Incentive Program Watershed Funding Series. This funding is specifically available to landowners located within the north and south fork reaches of the Llano River watershed and the James River Watershed (property does not have to include a riparian area to be considered and all projects potentially benefitting the watershed are eligible – riparian corridor enhancement; invasive species control; fence out projects; alternate water source projects; upland brush control, improved grazing practices, etc.). To learn more contact your local TPWD office or go to www.tpwd.state.tx.us/lip
